AB - J06064098 Laminate comprises (A) thermoplastic elastomer which contains acrylic elastomer, polyvinylidene fluoride resin and epoxide and (B) nylon resin.

- Also claimed are moulded prods. in plate and tube and containers formed from the laminate.

- The thermoplastic elastomer also contains a crosslinking agent. The acrylic elastomer is a polymer consisting mainly of acrylic acid alkyl ester or acrylic acid alkoxyalkyl ester and contg. copolymerisable ethylenically unsatd. cpd. and crosslinkable monomer. Most pref. is a copolymer of 85-95 wt.% of alkoxyalkyl acrylate and 5-15 wt.% of acrylonitrile. The polyvinylidene fluoride resin includes homopolymer and copolymer of vinylidene fluoride. It is used in more than 10, pref. 30-80 pts.wt. per 100 pts.wt. of acrylic elastomer. The epoxide includes epoxy gp.-contg. ethylenically unsatd. cpd. bisphenol A-type epoxy resin and silane coupling agent. It is used in more than 1.5, pref. 8-30 pts.wt. per 100 pts.wt. of acrylic elastomer. The nylon resin includes nylon 6, 11, 12, 66, 46, 610, 612 and MXD6.

- ADVANTAGE - Laminate has excellent resistance to heat and fuel oil, high rigidity and vibration absorbability.(Dwg.0/0)

IW - OIL HEAT RESISTANCE LAMINATE HIGH RIGID VIBRATION ABSORB COMPRISE NYLON RESIN THERMOPLASTIC ELASTOMER CONTAIN POLYACRYLIC ELASTOMER PVDF EPOXIDE

IKW - OIL HEAT RESISTANCE LAMINATE HIGH RIGID VIBRATION ABSORB COMPRISE NYLON RESIN THERMOPLASTIC ELASTOMER CONTAIN POLYACRYLIC ELASTOMER PVDF EPOXIDE
